

THE JOURNAL'S POLICY – SCIENTIFIC AND ETHICAL INTEGRITY

Kom: Journal of Religious Sciences publishes previously unpublished original scientific papers and reviews.

Kom is an open access journal.

Papers can be written in Serbian (Bosnian, Croatian, Montenegrin...) and English.

From 2012 to 2015 the journal was published twice a year, in May and November. Since 2016 it has been published three times a year, in May, August and November.

Kom publishes papers in the field of religious philosophy, religious civilization and social sciences, as well as contemporary religious thought.

The Editor's Obligations

The editor-in-chief of the *Journal of Religious Sciences Kom* has the final say on what manuscripts will be published. In making the decision the editor is guided by the editorial policy and takes into account legal regulations relating to libel, copyright infringement and plagiarism.

The editor may not have any conflict of interest in connection with submitted manuscripts. Should such a conflict of interest exist, the selection of reviewers and the fate of the manuscript is decided by the Editorial Board.

The editor is obliged to issue a judgment on the manuscript based on its contents, on the basis of impartiality.

The editor may not use unpublished material from the submitted manuscripts for his own research without a written permission from the author.

Authors' Obligations

Authors warrant that their contribution to the journal is their own original work that has not been previously published and that it is not under consideration for publication elsewhere.

Authors also warrant that after the publication in *Kom* the manuscript will not be published in another publication in any language without the copyright holder's consent.

Authors warrant that the rights of third parties will not be violated and that the publisher will not be held legally responsible should there be any claims for compensation.

Authors bear full responsibility for the content of submitted manuscripts and have to obtain permission for data publication from all parties involved in the research.

Authors who wish to include in their paper figures or extracts of text that have already been published are obliged to obtain the copyright holders' consent and to provide evidence, when submitting their paper, that such permission has been granted. The material for which such evidence is not provided shall be deemed an original work of the author.

Authors warrant that they have listed as authors only those persons who have significantly contributed to the content of the manuscript, and that all persons who have significantly contributed to the content of the manuscript have been listed as authors.

Authors must adhere to ethical standards relating to scientific research and that of the paper not being plagiarism. Authors warrant that the manuscript does not contain unsubstantiated or unlawful claims and that it does not infringe the rights of others.

In the event that authors realise that there is a significant error in their work after the publication, they are obliged to immediately notify the editor or publisher and to cooperate with them in order to either retract the paper or correct it.

Review

Accepted papers will be reviewed. The aim of the review is to help the editor decide whether a manuscript should be accepted or rejected and to improve the quality of the manuscript through a process of communication with the authors. The author's identity is known to the reviewers in the reviewing process, whereas the identity of the reviewers before, during and after the evaluation process remains unknown, although all the authors will have a general overview of the group of reviewers from the issue in which their paper has been published.

From the moment of receiving papers reviewers are given 30 days to complete their review.

Reviewers do not receive fees for conducting reviews.

The selection of reviewers is at the editor's discretion. Reviewers must have relevant knowledge of the area the manuscript deals with and may not come from the same institution as the author. Also, they must not be authors

who have recently had joint publications (as co-authors) with any of the authors of the submitted work.

The reviewer must not have a conflict of interest with the authors or research financiers. Should there be a conflict of interest, the reviewer is obliged to immediately notify the editor.

The reviewer who considers himself incompetent in the subject matter or field that the manuscript deals with is obliged to notify the editor.

Reviews must be objective. Comments relating to the personality of the author are considered inappropriate. A reviewer's report must be clear, evidenced, and appropriately substantiated.

Manuscripts sent to reviewers are deemed confidential documents.

The names of the reviewers are transparently published in every *Kom* issue.

In the main review stage, the editor sends the submitted paper to the reviewers who are experts in the scientific field that the paper deals with. Peer review form consists of a set of questions to be answered, which directs the reviewers towards the aspects that should be taken into consideration so as to decide on the fate of a manuscript.

In the final part of the form, reviewers must proffer their observations and suggestions on how the submitted manuscript could be improved.

Each paper is reviewed by at least two reviewers. Throughout the process, the reviewers act independently of each other. The reviewers are not familiar with the identities of other reviewers. If the reviewers' decisions are not the same (accept / reject), the lower mark is taken into account, i.e. the decision to reject the paper. Also, if this be the case, the editor-in-chief may seek the opinion of other reviewers to arrive at a final decision.

The editorial board is required to provide a good quality control of reviews.

If authors should have serious and reasonable objections to the reviews, the editors will check whether the review is objective and whether it meets academic standards. If the objectivity or quality of a review is dubitable, the editor-in-chief will annul the results of that review and assign additional reviewers.

Plagiarism

Plagiarism, or appropriation of other people's ideas, words or other forms of creative expression and the representation of them as one's own original work, is seen as a flagrant breach of scientific ethics. Plagiarism may include copyright infringement, which is punishable by law.

Plagiarism includes the following:

- Literal or almost literal appropriation or deliberate paraphrasing (with the aim of disguising plagiarism) of parts of texts by other authors without a clear pointing to the source or without marking of the copied fragments (e.g. by using quotes);
- copying of tables from someone else's papers without a proper source citing and / or without the permission for their usage from the author or copyright holders.

Authors are forewarned that every manuscript submitted for publication is checked for plagiarism. Manuscripts in which there are clear indications of plagiarism will be automatically rejected and the authors will be permanently forbidden to publish in the journal.

If it is found that a paper published in *Kom* is plagiarized, the author will be required to send a written apology to the authors of the original work or the institution that holds the copyright of the paper. Also, the paper will be immediately retracted.

Retraction of Published Papers

Published manuscripts will be available as long as possible in the form in which they were published without any changes. However, it may sometimes happen that a published manuscript has to be retracted. The main reason for the retraction of manuscripts is the need to correct an error so as to preserve the integrity of science.

An article has to be retracted when there is a breach of rights of the publisher, copyright holders or authors, in case of professional ethics codes violation, i.e. if the same manuscript has been submitted to several journals at the same time, in case of false authorship claims, plagiarism, fraudulent use of data and the like. In some cases, a paper can be retracted in order to correct the later detected errors in the manuscript or published paper.

Standards for dealing with retractions are defined by libraries and scholarly bodies, and the same practice has been adopted by *Kom*: in the electronic version of the original article (the one to be retracted) a HTML link is created with a retraction notice. The retracted article is kept in its original form save for a watermark on the PDF document, indicating on each page that the article is retracted.

Open Access

Kom: Journal of Religious Sciences is available in open access mode.

Articles published in the journal can be downloaded free of charge from the journal website and from other databases sites where the journal is located.

Kom does not charge APC (Article Processing Charge).

Self-Archiving

The journal enables authors to deposit the final, published version of their papers in PDF in an institutional repository and / or non-commercial databases, or to publish them on personal web pages (including profiles on social networks for scientists such as ResearchGate, Academia.edu, etc) and / or on the website of the institution they work for, at any time after the publication in the journal. In doing so, they have to specify the publisher as the copyright holder, and the source of the manuscript, as well as the digital object identifier (DOI) of the published article in a HTML link form.

Copyright

When a manuscript is accepted for publication, authors assign their copyright to the publisher. In the event that the manuscript is not accepted for publication in the journal, authors retain all rights.

The publisher is assigned the following rights to the manuscript, including supplemental materials and all parts, components or elements of the manuscript:

- the right to reproduce and distribute the manuscript in printed form, including printing on request;
- the right to print test copies, reprints and special editions of the manuscript;
- the right to reproduce the manuscript using photomechanical or similar means, including but not limiting itself to copying, and the right to distribute these copies;
- the right to reproduce and distribute the manuscript electronically or optically using all data carriers or storage media, and especially in machine readable / digitized form on data carriers such as hard-disk, CD-ROM, DVD, Blu-Ray Disc (BD), mini-disk, data tapes, and the

right to reproduce and distribute the manuscript with these data carriers;

- the right to preserve the manuscript in databases, including online databases, as well as the right to manuscript transfer in all technical systems and modes;
- the right to make the manuscript available to the public or closed user groups on the basis of individual requests for the use on the monitor or other readers (including e-book readers), and in printed form for users, either via the Internet, online service, or through internal or external networks.
